SEAT TEC Skylotec

Product information

The SEAT TEC is a robust and adjustable positioning seat developed for suspended working. Its broad and padded seat ensures maximum comfort and excellent stability. Thanks to its rigid edges, the operator's thighs are not crushed by the suspension straps. It also has laterally adjustable straps with autoblocking buckles.

The SEAT TEC must be used in combination with a full body harness with five attachment points. Optimal distribution of weights is guaranteed by four lateral and three lower gear loops.

... *Read more*

Material: Polyester, polyamide, steel, aluminium
Temperature range: -35°C up to 45°C.
Note: Only for use with full-body harnesses with 5 attachment points.
Warning: The work seat is not part of the PPE, and must never be used as the sole system. As a redundant safety system to the seat board, always use an additional catching system. A slip down into the harness must always be expected. When using it for rope-supported work, always observe the applicable rules of the government safety organisations regarding service life. The use of the work seat is only permitted to persons, who are skilled in rope-supported work.
