

Akapp Mobile pendants SBWK150G

Product information

Mobile pendants, standard fitted with terminal box (plastic or steel). The pendant cable and flat cable(s) can easily be inserted into the entry glands. Connection by means of individual terminals. AKAPP mobile pendants have been developed specifically for cranes requiring remote pendant control, therefore allowing the crane operator to work from a safe position.

The box is provided with a cable gland PG48 for the flat cable(s) to enter. A cable gland PG21 at the bottom allows entry for the pendant cable (see mounting diagram). This is usually a round cable with 2-sided integrated steel wires. A strainer wire termination is included. The terminal box is connected to the two suspension trolleys by means of swivels. This allows the terminal box to swing without affecting the movement of the trolleys.

Optional:

This mobile pendant can optionally be fitted with a brake unit on one suspension trolley, activated by means of a towing chain.

Also available as mobile pendant version with plug/socket, type: SBWS150M.
